- 2.260 Egyptian Lacquer Manufacturing Company Building, 3052 West Carroll Avenue, completed 1926, Lockwood, Greene & Company, architects. Fritz W. Albert, sculptor. Material: terra cotta by the American Terra Cotta and Ceramic Company. Small terra cotta panels displaying artistic interpretations or facsimiles of ancient Egyptian hieroglyphs appropriately appear at numerous locations on the façade of the Egyptian Lacquer Manufacturing Company Building. To most observers these appear to be authentic representations of that written language that comprised some 5,000 distinct symbols or characters, and which was employed by the ancients from approximately 3200 BCE to 400 CE. Of course the employment of these hieroglyphs, with a selection of other Egyptian-based vignettes, directly references this company's name and completes a convincing *tour-de-force* design offered by the architects and terra cotta modelers.

- 2.261 Reebie Storage Company Building, 2325 North Clark Street, completed 1923, George S. Kingsley, architect. Fritz Albert of Northwestern Terra Cotta Company, sculptor.

The origins of these ancient Egyptian hieroglyphs were presumably borrowed from artwork found within a pharaonic tomb or from those discovered upon temple walls; precisely which dynastic period was sourced is elusive and only generic images may have been employed. After all, this building was constructed not as a museum, but as storage warehouse. In contrast with—and as an important distinction—the hieroglyphic panels found upon the façade of the Egyptian Lacquer are represented in intaglio (the lines and figures are incised or cut into the surface) while those of the Reebie are represented in cameo (the background is recessed allowing the figures to stand out in relief).

Chapter Three: Metal Town

- 3.01 John Hancock Center, 875 North Michigan Avenue, completed 1969, Skidmore, Owings & Merrill, architects. Material: aluminum.
- 3.02 307-309 West Chicago Avenue, completed c.1902, architect unknown. Material: cast iron. This Corinthian capital casts an especially interesting shadow.
- 3.03 357 West Chicago Avenue, completed c.1890, John Otter, architect. Material: cast iron. A decorative cast iron column supports a load-carrying beam. Careful examination of the beam's web reveals the raised—and inverted—words: Jones & Laughlin.
- 3.04 505 North La Salle Street, completed 1891, architect unknown. Material: cast iron. Anchors, like this example, may be found throughout the city. These decorative objects carry out a structural role for older, brick and stone buildings: This anchor is internally attached to a metal rod (secured to another anchor) that spans the building and which acts to bind the building together, preventing old brick walls from bulging outward.
- 3.05 601 West Randolph Street, completed c.1900, architect unknown. Material: cast iron. Screwed in place, this grillage offers a design reminiscent of an English crop circle.
- 3.06 820 West Jackson Boulevard and 231 South Green Street, completed 1903, architect unknown. Material: pressed tin (painted).
- 3.07 826 West Armitage Avenue, completed c.1885, architect unknown. Material: pressed tin (painted).
- 3.08 900 West Lake Street, completed 1902, Frederick Ahlschlager, architect. Material: cast iron.
- 3.09 900 West Lake Street, completed 1902, Frederick Ahlschlager, architect. Material: cast iron.
- 3.10 934-936 West Armitage Avenue, completed 1891, architect unknown. Material: cast iron.
- 3.11 934-936 West Armitage Avenue, completed 1891, architect unknown. Material: cast iron.
- 3.12 1393 West Lake Street, completed 1891, architect unknown. Material: copper.

- 3.13 1712 North Crilly Court, completed 1885, Flanders & Zimmerman, architects. Material: pressed tin (painted).
- 3.14 2156-2158 North Halsted Street, completed c.1890, architect(s) unknown. Material: cast iron.
- 3.15 2220 North Halsted Street, completed 1891, architect unknown. Material: pressed tin (painted).
